The Git-centred workflow

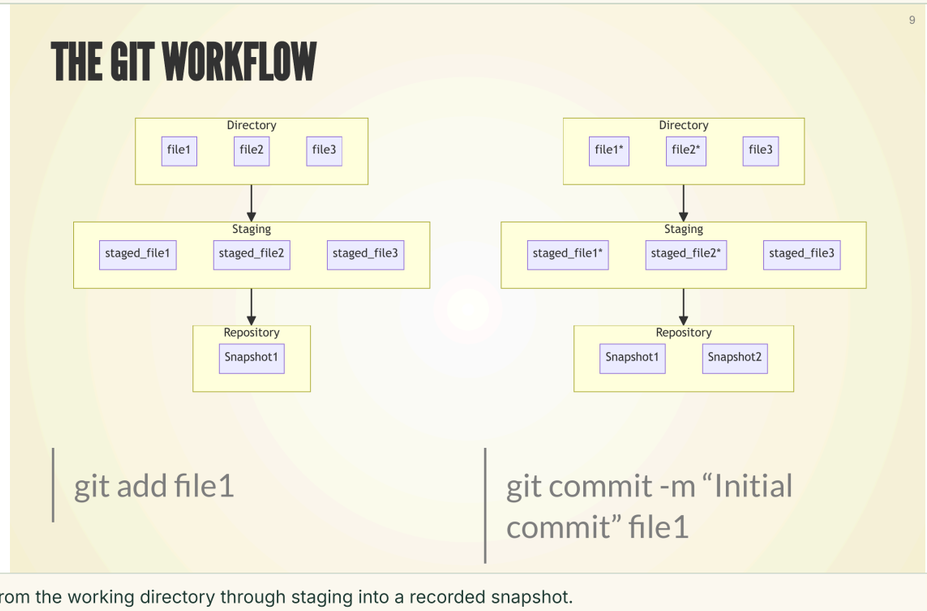

I presented how Git records changes and supports collaboration, from local commits to sharing work across a team.

Four-slide print selection · six slides in the online overview

4 selected slides · one-page overview

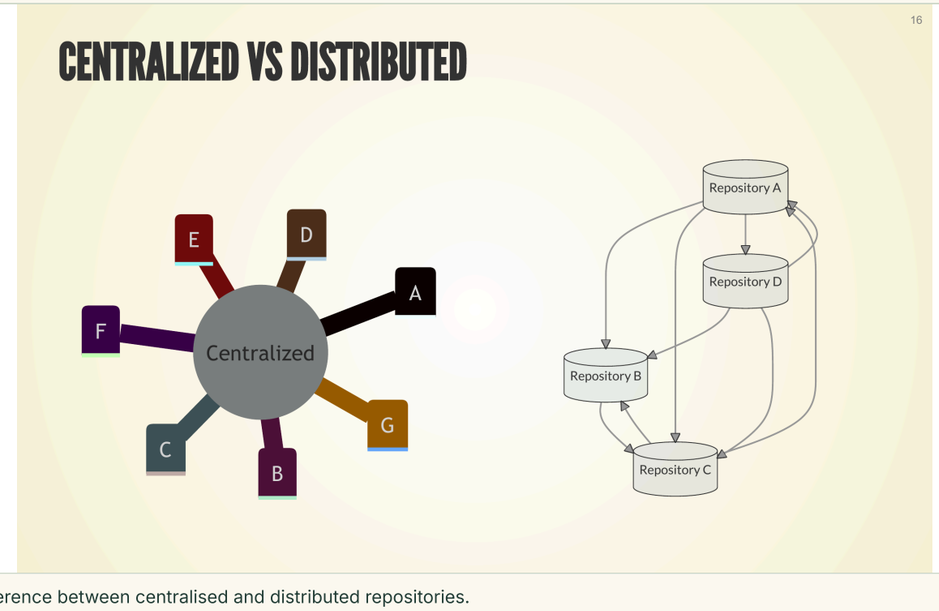

Slide order follows the original presentation

Slide 9 Record changes in stages

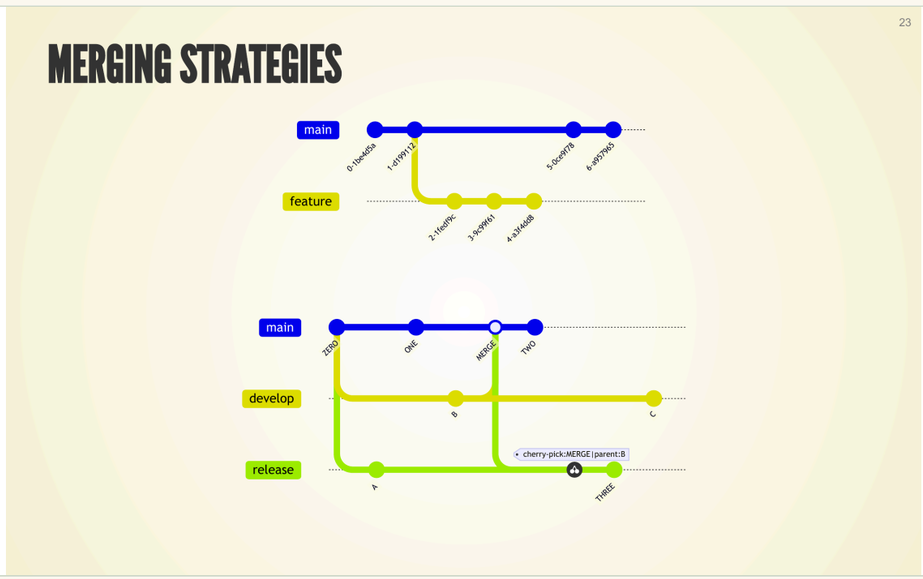

Move changes from the working directory through staging into a recorded snapshot.

Slide 16 Understand distributed history

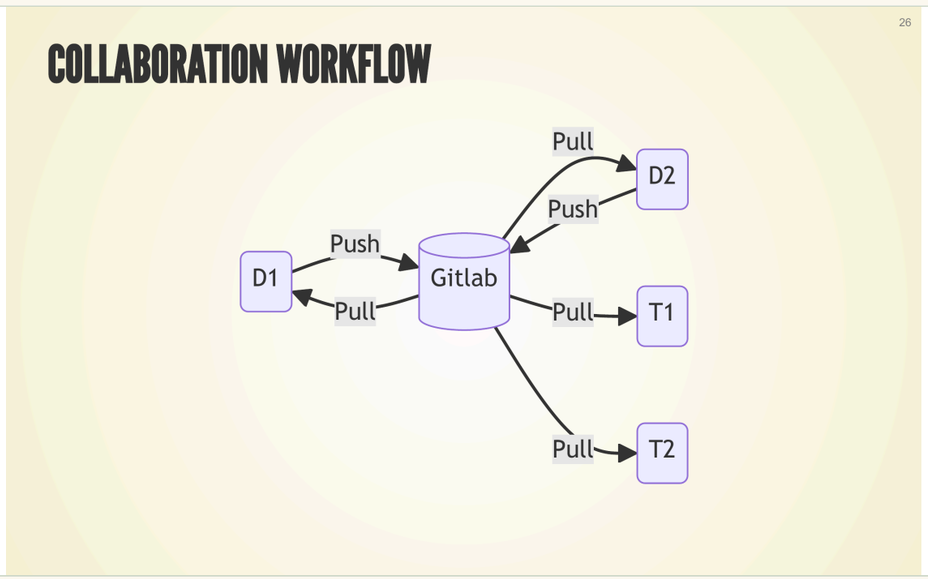

Explain the difference between centralised and distributed repositories.

Slide 23 Keep changes organised

Use branches and deliberate merging to organise different lines of work.

Slide 26 Coordinate shared work

Show how contributors share changes and testers obtain them.
